

Let's Learn Numbers

- tracing, matching, sequencing with Numicon shapes

1

2

3

Instructions:

For pages 1 – 10:

- Print on card stock and laminate. Help your child trace the numbers. Crayola washable markers work well and wash easily off laminated sheets.
- Help your child find the matching numicon shape and place it on top of the printed shape. At first, do not count the dots with your child. As in sight reading words as a whole, we want the kids to recognize the shapes as a whole and identify it as the corresponding number. Once your child can identify the shape, you can begin counting the holes in the shape by placing cheerios or numicon pegs in the dots.

For pages 11 – 15 or 16 – 20:

- Print on card stock and laminate. Cut up the cards on the black lines.
- Help your child place the colored numbers 1 – 4 in sequential order, while counting out loud. Ask your child, what number comes next after they place each card.
- Next, help your child place the matching colored numicon card under the corresponding number. The colors will help your child match the correct numicon card to its number.
- When your child can do numbers 1 – 4 successfully, add in one more number each lesson.
- When your child can do numbers 1-10 successfully with the numicon cards, have your child place numicon shapes under the colored cards.
- Next, help your child do the same activities listed above using the black and white cards.

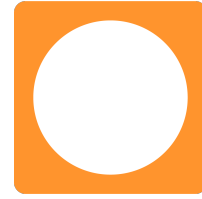

For pages 21 – 45:

- Print on card stock and laminate.
- Follow the instructions on the bottom of each page.
